9,562 lbs
diverted from
the landfill

Material Breakdown

5,601.4 lbs of recycling were recycle by

- Republic Recycling
- Cullison's Scrap Metal
- NexTrex Recycling Program

4,774 estimated lbs of cardboard

324 lbs of cans

308.2 lbs of Plastic Bottles and cartons

195.2 lbs of heat sheets

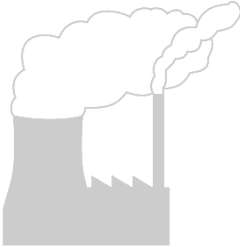

761.4 lbs of compost were taken to
- Athens-Hocking Organics

An estimated 3,200 lbs of clothing
were donated

CO2 and Volume Estimates

CO2 is a potent greenhouse gas.

When compostable or recyclable materials end up in the landfill, and new materials are made in their place, it creates CO2 and other greenhouse gasses including Methane (a greenhouse gas 30x as potent as CO2.)

By recycling and composting at your event, you kept potent greenhouse gasses from entering the atmosphere. This is measured in MTCO2E (Metric Tons of CO2 Equivalent). We've converted that into lbs. below:

CO2 Estimates

6362.8 total lbs.

of recycling and compost were diverted from the landfill

Saving 10.2 tons of CO2 equivalent gasses from entering the atmosphere.

Equivalent to:

Carbon sequestered by **170** trees grown over 10 years

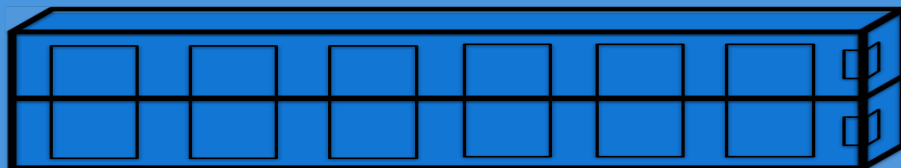

Or
1,148 gallons of gasoline

Or
1,241,340 smartphones charged
